

EPA ID: DEN000306687 Site Name: PARKLYNN DRY CLEANERS

State ID: DE-352
ORIGINAL

Alias Site Names: LIMESTONE DRY CLEANER

City: WILMINGTON

Refer to Report Dated: 9/23/2010

County or Parish: NEW CASTLE

State: DE

Report Developed By: STATE

Report Type: PRELIMINARY ASSESSMENT 001

- ☒ 1. Further Remedial Site Assessment Under CERCLA (Superfund) is not required because:
NFRAP-Site does not qualify for the NPL based on existing information
- ☐ 2. Further Assessment Needed Under CERCLA:

Discussion/Rationale:

The site receives drinking water supplied by the Artesian Water Company. There are 6 domestic wells are located within 1.0-mile of the site. The nearest domestic wells are located within 1.25 miles south east of the site. There is 1 drinking water intake in a downstream located within the 15 mile target distance limit. The surface water and groundwater in the vicinity of the site are major drinking water sources. Parklynn Cleaners' runoff drains toward the Calf Run Creek, the Red Clay, the White Clay, the Christina River, and the Delaware Bay. There is no history of spills or known contamination at this facility.

The Parklynn Cleaners October 2010 Preliminary Assessment report serves as the basis for the Superfund decision to NFRAP. Though, Superfund's most significant concern includes the potential migration of tetrachloroethylene contaminated groundwater to potable water wells, there is no evidence a spill has occurred. This facility is an active facility as seen by the store's website: <http://www.parklynncleaners.com>. It is permitted under the RCRA program as a RCRA Conditionally Exempt Small Quantity Generator. As such, this facility should be overseen by the the State's RCRA program. Further concerns regarding the groundwater in the area should be addressed using other state mechanisms should be utilized to investigate potential contamination issues.

Based on the Preliminary Assessment, the EPA anticipates no need to take any Superfund enforcement, investigatory, cost recovery, or cleanup action at this site unless new data or information that warrants further consideration or conditions not previously known to EPA regarding the site are discovered, and therefore the site will be entered with a priority of "No Further Remedial Action Planned" and will be archived from the active CERCLIS database.

Parklynn Cleaners
 4526 Kirkwood Highway,
 Wilmington (New Castle County), DE
 Latitude 39.724389°N Longitude -75.656836°W

DNREC conducted a Preliminary Assessment to evaluate the Parklynn Cleaners as a candidate for the National Priority List (NPL). DNREC personnel conducted a site visit on September 14, 2010.

Site History

Parklynn Cleaners is an active dry cleaner located in a 17,386 square-foot retail strip mall. Parklynn Cleaners has continuously operated at this location for 19 years (since 1981) though incorporated in 1974. Parklynn Cleaners is RCRA Conditionally Exempt Small Quantity Generator based on its use of tetrachloroethylene.

The site receives drinking water supplied by the Artesian Water Company. There are 6 domestic wells located within 1.0-mile of the site. The nearest domestic wells are located within 1.25 miles south east of the site. There is 1 drinking water intake in a downstream located within the 15 mile target distance limit. The surface water and groundwater in the vicinity of the site are major drinking water sources. Parklynn Cleaners' runoff drains toward the Calf Run Creek, the Red Clay, the White Clay, the Christina River, and the Delaware Bay. There is no history of spills or known contamination at this facility.

The Parklynn Cleaners October 2010 Preliminary Assessment report serves as the basis for the Superfund decision to NFRAP. Though, Superfund's most significant concern includes the potential migration of tetrachloroethylene contaminated groundwater to potable water wells, there is no evidence a spill has occurred. This facility is an active facility as seen by the store's website: <http://www.parklynncleaners.com>. It is permitted under the RCRA program as a RCRA Conditionally Exempt Small Quantity Generator. As such, this facility should be overseen by the the State's RCRA program. Further concerns regarding the groundwater in the area should be addressed using other state mechanisms should be utilized to investigate potential contamination issues.

Based on the Preliminary Assessment, the EPA anticipates no need to take any Superfund enforcement, investigatory, cost recovery, or cleanup action at this site unless new data or information that warrants further consideration or conditions not previously known to EPA regarding the site are discovered, and therefore the site will be entered with a priority of "No Further Remedial Action Planned" and will be archived from the active CERCLIS database.
